

Ninety

A live football exchange for the World Cup.

Trade live win-probability on every match. Priced by TxLINE. Settled trustlessly on Solana.
Play-money — 1,000 free credits a match. No deposits. No payouts. Ever.

TxLINE

PLAY-MONEY

WC26

61.4

CAN — MAR · 74' · HOME

A billion watch. Almost none play.

The World Cup is the largest shared live event on earth — and the audience just sits there.

Scores apps

Passive. You refresh a number. Nothing you do changes anything.

Sportsbooks

Gated, licensed, predatory, and banned from most app stores. Most fans can't or won't.

Prediction markets

Built for traders, not fans. Cold, sparse, and nobody's watching the match.

The gap

A live market a fan can actually play — with the drama of a real exchange and none of the money, the licences, or the harm.

Price is probability.

Every outcome trades from 0 to 100. The price IS the market's live read of the chance.

HOME

61.4

Canada are a 61.4% chance right now.

Buy at 61.4. A winning share settles at 100 credits.

Buy below the true chance — that's the edge.

- **1,000 free credits, every match**

No deposit. No wallet funding. Just play.

- **LMSR automated market maker**

Always a price, always liquid — no counterparty needed.

- **Home / Draw / Away**

One market, three outcomes, prices always summing to 100.

- **We say price, trade, credits**

Never the other words. That is a product decision, not a euphemism.

The 90 seconds that make this product.

A goal goes in. Watch what happens.

01

GOAL

TxLINE's signed feed carries the goal in milliseconds.

02

HALT

The market freezes. Nobody can trade a price that's already dead.

03

REPRICE

The engine re-anchors. The cliff lands on the chart.

04

SPREAD DECAYS

Liquidity walks back in over 60 seconds.

05

THE BOOTH

An AI commentator narrates the swing, quoting the real move.

06

SETTLE

Full time. Solana verifies TxLINE's proof. Nobody is trusted.

The board

Every live match, every price, one glance. Real WC26 data — no placeholders.

2 @hexfan+16,810

Why Solana. Why TxLINE.

Because the alternative is asking you to trust us — and you shouldn't have to.

SOLANA

Our Anchor program is the referee.

settle_market is permissionless and one-shot. It refuses to settle unless a TxLINE proof verifies on-chain, by CPI. There is no admin key. There is no override. We could not cheat our own market if we wanted to.

Sub-second finality and sub-cent fees are what make per-match settlement, leaderboard roots, and on-chain Moments economically possible at all. On any other chain this product does not exist.

TxLINE

Every price we quote traces to a signed feed.

Consensus odds de-vigged into fair marks. Live scores that trigger the halt. And the same feed that moves the price is the one that proves the result — cryptographically, on-chain.

That is the thing no other data provider gives you: the price and the proof come from one source. Nine TxLINE endpoints, live-verified on devnet, every response schema-validated.

The stack

Seven layers, one law: every input becomes a signed event on the bus. No service calls another directly.

TxLINE	Signed odds + scores. SSE.
INGEST	Normalise → bus. Gap recovery, exactly-once.
CORTEX	Python. Shin de-vig → fair marks + hazard.
ENGINE	LMSR. Single-writer. Journal-then-ack.
API + WS	Fastify. Read model. Live tape.
SOLANA	Anchor. Proof-verified settlement.
WEB	Next 15. The board + the Terminal.

7

days

407

source files

Built for a fan, not a quant.

The terminal is the engine. This is the experience wrapped around it.

Wallet, or no wallet

Phantom if you want it. Email-and-OTP if you don't. A custodial key is derived for you — you're trading in ten seconds, not ten minutes.

Free games on the live feed

Next Goal. Beat the Market. Bracket Pick'em — scored by an on-chain proof, not by us.

Moments

The biggest swing of the match, rendered as a card. Yours to keep, minted on Solana.

The whole tournament

48 teams, 12 groups, 16 stadiums, all 104 fixtures — through to the Final at MetLife, July 19.

We broke our own settlement.

And then we shut it off rather than ship it.

The finding

The sanctioned settlement path selects the finalised score record OFF-chain, by sequence number. On-chain, `validate_stat` proves a stat leaf is in the Merkle root — but it never sees the record's Action field. So a caller can pick a mid-match sequence and produce a proof that verifies identically. Finality is asserted, not proven.

What we did

SETTLEMENT_LIVE = false. Hard-gated in the program itself. We shipped the proof path fail-closed rather than ship a settle we could not prove was safe.

Why it matters

Two independent adversarial audits, and the question is now with TxODDS. This is what building on a new oracle actually looks like — and we would rather be the team that found it than the team that shipped it.

Seven days. One engineer. An agent team.

Not vibe-coded. Governed.

● **Laws, not prompts**

A CLAUDE.md constitution — design law, architecture law, the play-money invariant — enforced by git hooks that block a violating write before it lands.

● **Specialist agents**

engine-guardian on the trading core. proof-auditor on the Anchor program — it found the settlement forge. design-cop judges every screen against a rubric. quant-reviewer on the pricing math.

● **53 ADRs**

Every decision is written down before it is coded. Chat is not memory. That is why seven days of work didn't collapse into mud.

● **The loop that mattered**

Screenshot the render → look at it → judge it → fix it. Every real UI improvement came from seeing the page, never from writing blind.

Where this goes

The Final is July 19. That's the start, not the finish.

NOW

Live wiring + the Final

Ninety monitors the World Cup Final live — real TxLINE prices, real halts, real settlement.

NEXT

Prize money → infrastructure

A managed Postgres and Redis, a Helius key, and a Bubblegum tree so Moments mint on mainnet. Every dollar goes into keeping the feed and the proofs running.

THEN

Beyond football

TxODDS is multi-sport. The engine, the bus, and the proof path don't know or care that this is football. The next tournament is a config change.

THE MOAT

The clean top-of-funnel

Play-money is app-store safe and licence-free. That makes Ninety the acquisition channel a sportsbook cannot legally build — and the one they'll want to partner with.

Ninety

The market moves the moment the ball does.

Priced by TxLINE. Settled by Solana. Free to play, forever.

[TRY IT](#)[GITHUB](#)[SOLSCAN](#)

Ninety is free to play. Credits are play money and have no cash value.
