

Ninety — Project State + Frontend Vocabulary (knowledge transfer)

Synthesized from the full build. Use the vocabulary sections to write precise small-block FE prompts.

1. POINTER CHART — DONE vs REMAINING (priority)

☐ DONE — BACKEND (STRONGEST PART, ~95%)

- LMSR engine (single-writer, journal-then-ack, tested) · bus (Redis Streams) · schema (zod/AnyEvent)
- TxLINE client (live-verified devnet, 8 wrappers) · cortex pricing (Shin de-vig, hazard)
- Workers: ingest · cortex · jobs (settlement saga) · Anchor program (BUILT) · auth · Booth
- EarlyWhistle Telegram bot (mostly built, ADR-023) · ~257 tests green

☐ DONE — FRONTEND (SURFACES EXIST)

- Landing (notio-based) · board · terminal · moments · competition · leaderboard · portfolio
- how-it-works · bracket · River-9 logo · single AppShell · halt sequence · component pass (magicui etc.)
- Baked: 118 flags · TheSportsDB crests/jerseys/player faces · stadium images

☐ DONE — PROCESS/LAW

- CLAUDE.md (verification law · execution law · the ONE router → proven skills) · design-cop verdicts
- PROVENANCE gate · hooks · India submission (done)

☐ REMAINING — BY PRIORITY

P0 — visible bugs / embarrassing (fix first) - [] Scramble heading gibberish ("Goal. kfc. mgqcfie.") — text-scramble makes headings unreadable - [] 3D dribbler = grey capsules in an empty void → needs rigged GLTF model (human provides) - [] Empty black voids on landing → fill with imagery/video - [] Verify on PRODUCTION build, not dev

P1 — backend construction (no credentials) - [] `POST /orders` (the trade path — currently `export {}`) → engine → fills → ledger - [] `moments.ts` (empty stub) · games API · events/actions API · search API - [] Rich data layer (cached free APIs: TheSportsDB/API-Football/Football-Data) - [] API-contract alignment (endpoint shapes = frontend fixture shapes) — `docs/API-CONTRACT.md` - [] Outcome-space synthesis: derive H/D/A from feed's O/U + Asian handicap (revive dixon_coales, quant-review)

P2 — deploy (needs YOUR accounts/keys) - [] Supabase (Postgres) · Redis Cloud (30MB) · Fly (api + 4 workers) - [] Deploy Anchor program to devnet (`anchor deploy` — NOT deployed, AccountNotFound) - [] TxLINE live ingest (TXLINE_NETWORK + funded wallet) - [] Wire frontend → live API (behind NEXT_PUBLIC_USE_FIXTURES)

P3 — Solana as core - [] Real ProofBadge reads (@solana/web3.js) · wallet auth · leaderboard roots · moments cNFTs - [] SETTLEMENT_LIVE stays FALSE (the forge — until TxODDS confirms finality)

P4 — richness - [] Imagery/video pass (rights-free: Pexels/Coverrr/Unsplash) · 3D dribbler (rigged model) - [] Depth tabs (lineups pitch/stats/h2h/events) · Next Goal game · Telegram landing highlight

2. FEATURES YOU MAY HAVE FORGOTTEN

- **The settlement forge finding (ADR-036/037)** — your STRONGEST story: you broke your own settlement, proved it forgeable, and hard-gated it off. Lead your submission with this.
- **The two-source rule (ADR-051)** — TxLINE owns what MOVES; worldcup26/baked owns what SITS STILL.
- **The Booth** — AI commentary on every price swing (built, tested).
- **Moments** — biggest-swing cards, mintable as cNFTs.
- **VOID/refund on abandoned matches** — 19 TxLINE phase codes → trustless refund, no admin path.
- **Action events** — shot/free_kick/var/substitution → the events timeline (sponsor-native, free).
- **Mainnet SL12 = real-time free** vs devnet SL1 — for live match data.

- **/account = forecasting track record** — the "who predicts football best" credential (play-money angle).
- **Next Goal game** — free one-tap, resolves on a real goal.
- **GitBook docs** (sushi-2.gitbook.io/ninety-docs) — lead with the TxLINE endpoint map.

3. FRONTEND MAP — every page, section, component (the WORDS)

ROUTES (PAGES)

`/` landing · `/board` (or `/matches`) · `/terminal` · `/match/[id]` · `/competition` · `/bracket` · `/portfolio` · `/account` · `/leaderboard` · `/moments` · `/moments/[id]` · `/proofs` · `/how-it-works` · `/profile/[handle]` · `/history` · `/settings` · `/onboarding` · `/replay/[id]` · `/play` (games) · `/docs`

LANDING SECTIONS (TOP → BOTTOM)

`hero` · `the loop` (goal → halt → reprice) · `3D football scene` · `price is probability` (count-up number) · `velocity chapter break` · `the football experience` · `proof / on-chain` · `the booth` · `the tournament` (globe + stats) · `pricing` (free) · `games/moments/telegram bento` · `close CTA`

TERMINAL COMPONENTS

`screener rail` · `score header` · `Momentum River (BigRiver)` · `market status panel` · `price cells (H/D/A)` · `trade panel` (buy/sell · size slider · Max · submit) · `portfolio card` · `open positions` · `leaderboard` · `today's movers` · `depth tabs` (Lineups · Stats · H2H · Events) · `the Booth` · `attack momentum` · `latest events` · `command palette (%K)`

BOARD COMPONENTS

`ticker` · `header/nav` · `left rail` (my matches · WC stages · followed teams · settlement–Solana) · `match card` · `match list` (grouped by competition) · `featured panel` · `mini-river (sparkline)` · `right rail` (top traders · starting soon · moment of the day) · `biggest movers` · `footer`

4. UI / DESIGN VOCABULARY (words to ADD / REMOVE / TUNE)

TOKENS & PALETTE (NEVER RAW HEX)

`--bg #0B0D10` · `--surface #14171C` · `--hairline #232A33` · `--up #2BD97C` (green) · `--down #FF3D81` (pink) · `--halt #FFB020` (amber, halts only) · `--chain #9D6BFF` (violet, on-chain only) · `--text-hi #F5F7FA` · `--text-lo #97A0AF`

TYPE

`Archivo` (display/hero) · `Inter` (UI) · `IBM Plex Mono` (numbers, tabular-nums, prices one decimal)

MOTION / EFFECTS VOCAB

`tick-flash` (180ms on price change) · `halt sweep` (amber) · `count-up / number ticker` · `Ken-Burns` · `parallax` · `scroll reveal` · `ScrollTrigger` · `pin` · `stagger` · `crossfade` · `draw-on` · `marquee` · `bento` · `spotlight card` · `border-beam` · `animated-beam` · `text-scramble` (⚠ NOT on headings — makes them unreadable) · `shimmer` · `confetti` (game wins only)

LAYOUT / STRUCTURE VOCAB

`hero` · `hierarchy` (one hero per screen) · `restraint` · `subtract-then-elevate` · `spacing scale` · `density` · `void` (bad — empty space to fill) · `scrim` (dark overlay for legible copy) · `mix-blend` · `gradient` (landing hero only, ADR-058) · `glassmorphism` (banned) · `full-bleed`

STATES / A11Y VOCAB

`hover` · `focus-visible` · `active` · `disabled` · `loading/skeleton` · `empty state` · `error state` · `prefers-reduced-motion` · `44px hit target` · `contrast` · `aria-live`

QUALITY/PROCESS VOCAB

`token-only` · `re-skin` · `provenance row` · `design-cop verdict` · `read-out-loud test` · `MotionScore` · `FCP` · `local`
`production build` · `lazy / IO-gated` · `canvas guard (width≠300)`

COPY LAW (LEGAL — NEVER BREAK)

Say: `price` · `trade` · `credits` · `shares` · `points` · NEVER: `bet` · `stake` · `odds` · `wager` · `gamble` · `play-money` · `no deposits`
· `no payouts, ever` .

5. TOMORROW — TG BOT · APIs · BLOCKCHAIN (the parts you don't know)

TELEGRAM BOT

- EarlyWhistle is MOSTLY BUILT (ADR-023, apps/worker-jobs): `renderCard`, `sparkline buffer`, `send scheduler`, `per-match state machine`, `settled-card with Solscan proof + Moment photo`.
- REMAINING: wire the stubbed Redis-backed readers (`fixture/leaderboard/moment`) + the `getUpdates` loop in `main.ts` · connect a real bot token · deploy `worker-jobs` · add a landing highlight section.
- HUMAN GATE: create the bot via `@BotFather` → `TELEGRAM_BOT_TOKEN` in `.env` (never chat/commit).
- Copy law applies in the bot (booth-filter enforces it).

APIS (BUILD ORDER)

1. Align contract to frontend shapes (`docs/API-CONTRACT.md`) — FIRST.
2. `POST /orders` (trade) → `engine.applyOrder` → `fills` → `ledger` → WS. + `GET /orders` .
3. `moments.ts` · `/games/picks` · `/matches/:id/events` · `/search` .
4. Rich data layer: cached (Redis TTL) proxy over TheSportsDB + API-Football + Football-Data. Two-source law: STILL data only; live scores/prices stay TxLINE.
5. HUMAN GATE: data-API free keys in `.env`.

BLOCKCHAIN

- Program is BUILT, NOT DEPLOYED (`AccountNotFound`) → `anchor deploy` to devnet (you have 1.99 SOL).
- Then: `@solana/web3.js` in web · real `ProofBadge` reads → working Solscan links · wallet identity auth · leaderboard roots on-chain · moments cNFTs.
- `SETTLEMENT_LIVE` stays FALSE (the forge, ADR-036/037) until `TxODDS` confirms finality binding.
- Skills to use: `solana-dev-skill` (deploy) · `quicknode/solana-finance-skill` (chain reads).
- DO NOT install `solana-agent-kit` (real-money DeFi agent — violates play-money).

The whole page is a market for ninety minutes. Priced by TxLINE. Settled on Solana. Play-money, forever.
